

AZ-900 Practice Exam

Microsoft Azure Fundamentals — Questions with Answers

Q1. For each of the following statements, select Yes if true. Otherwise, select No.

- You can create custom Azure roles to control access to resources.
- A user account can be assigned to multiple Azure roles.
- A resource group can have the Owner role assigned to multiple users.

✓ Yes / Yes / Yes

Q2. Your company has 10 departments. Each department requires a different payment option for Azure services. What should you create for each department?

- A. A resource group
- B. A subscription
- C. A container instance
- D. A reservation

✓ B. A subscription

Q3. For each of the following statements, select Yes if true. Otherwise, select No.

- An Azure subscription can have multiple account administrators.
- An Azure subscription can be managed by using a Microsoft account only.
- An Azure resource group can contain multiple Azure subscriptions.

✓ Yes / No / No

Q4. What is used to grant permission to Azure Virtual Desktop resources?

- A. Role-based access control (RBAC) roles
- B. Tags
- C. Resource groups
- D. Application security groups

✓ A. Role-based access control (RBAC) roles

Q5. For each of the following statements, select Yes if true. Otherwise, select No.

- Single sign-on (SSO) requires that all users sign in by using the Microsoft Authenticator app.
- Authentication is the process of establishing which level of access an authenticated user has.
- Conditional Access uses signals collected during sign-in to allow or deny access.

✓ No / No / Yes

Q6. You plan to create a virtual machine in Azure. Where will the virtual machine be placed?

- A. In a storage account
- B. In an administrative unit
- C. In a resource group
- D. In an application group

✓ C. In a resource group

Q7. Match the Azure service to the correct description:

- ExpressRoute
- Virtual network peering
- VPN gateway

✓ ExpressRoute = Private, dedicated connection from on-premises to Azure (no public internet)
Virtual network peering = Connects two Azure VNets with low-latency, high-bandwidth
VPN gateway = Encrypted tunnel over the public internet to Azure

Q8. For each of the following statements, select Yes if true. Otherwise, select No.

- Data stored in an Azure Storage account automatically has at least three copies.
- All data copied to an Azure Storage account is backed up automatically to another Azure datacenter.
- An Azure Storage account can contain only up to 2 TB of data and one million files.

✓ Yes / No / No

Q9. You plan to extend your on-premises network to Azure. Which Azure resource defines the on-premises VPN device?

✓ Local Network Gateway

Q10. How many copies of data are maintained by an Azure Storage account that uses locally redundant storage (LRS)?

- A. 3
- B. 4
- C. 6
- D. 9

✓ A. 3

Q11. Requiring a user to enter a password and a one-time passcode when signing in is an example of which security feature?

✓ Multi-Factor Authentication (MFA)

Q12. In the Infrastructure as a Service (IaaS) model, which two components are the responsibility of the cloud provider?

✓ Physical hardware (servers/network) and Physical datacenter security

Q13. Match the Azure service to the correct description:

- Azure Virtual Desktop
- ExpressRoute
- Virtual Private Network (VPN)

✓ Azure Virtual Desktop = Provides a full Windows desktop experience from the cloud
ExpressRoute = Private, dedicated connection bypassing the public internet
VPN = Encrypted connection over the public internet

Q14. _____ ensures access to cloud resources in the event of a service failure.

✓ High availability

Q15. What does a customer provide in a Software as a Service (SaaS) model?

✓ Data and user access (accounts/identities)

Q16. In the Software as a Service (SaaS) model, which responsibility is shared between Microsoft and the customer?

✓ Identity and access management / Infrastructure security (shared responsibility)

Q17. For each of the following statements, select Yes if true. Otherwise, select No.

- Azure Reservations cost less than pay-as-you-go pricing.
- Two Azure virtual machines of the same size always have the same monthly cost.
- When an Azure virtual machine is stopped, storage costs still apply.

✓ Yes / No / Yes

Q18. You need to migrate an on-premises server using a lift-and-shift approach. To which cloud service model should you migrate?

✓ IaaS (Infrastructure as a Service)

Q19. Match the cloud benefit to the correct requirement:

- Disaster recovery
- Geo-distribution
- High availability
- Scalability

✓ Disaster recovery = Recover from catastrophic failure

Geo-distribution = Deploy resources close to users globally

High availability = Ensure continuous access despite failures

Scalability = Adjust resources to meet changing demand

Q20. For each of the following statements, select Yes if true. Otherwise, select No.

- Azure Files is an example of Infrastructure as a Service (IaaS).
- A DNS server running on an Azure virtual machine is an example of Platform as a Service (PaaS).
- Microsoft Intune is an example of Software as a Service (SaaS).

✓ Yes / No / Yes

Q21. _____ enables Azure resources to be deployed close to users.

✓ Geo-distribution (or Azure Regions)

Q22. When planning to migrate a public website to Azure, you must plan to _____.

✓ Pay monthly usage costs (switch from CapEx to OpEx / consumption-based pricing)

Q23. For each of the following statements, select Yes if true. Otherwise, select No.

- Creating and configuring a virtual network is part of the PaaS model.
- Updating application code in Azure App Service is the customer's responsibility.
- Configuring user access in PaaS is the customer's responsibility.

✓ No / Yes / Yes

Q24. For each of the following statements, select Yes if true. Otherwise, select No.

- A resource lock can be applied to a Microsoft Entra user.
- Multiple resource locks can be applied to the same virtual machine.
- A delete lock allows modification of a resource but prevents deletion.

✓ No / Yes / Yes

Q25. You need to ensure that resources can be created only in specific Azure regions. What should you use?

✓ Azure Policy

Q26. For each of the following statements, select Yes if true. Otherwise, select No.

- Azure PowerShell can be installed on macOS.
- Azure Cloud Shell can be accessed from a Linux computer using a browser.
- The Azure portal can be accessed only from Windows devices.

✓ Yes / Yes / No

Q27. For each of the following statements, select Yes if true. Otherwise, select No.

- Inbound traffic to Azure using ExpressRoute is always free.
- Outbound traffic from Azure to on-premises networks is always free.
- Data transfer between Azure services in the same region is always free.

✓ Yes / No / Yes

Q28. Azure Resource Manager (ARM) templates use which format?

✓ JSON

Q29. For each of the following statements, select Yes if true. Otherwise, select No.

- Azure Monitor can monitor the performance of on-premises computers.
- Azure Monitor can send alerts to Microsoft Entra security groups.
- Azure Monitor can trigger alerts based on Log Analytics data.

✓ Yes / Yes / Yes

Q30. For each of the following statements, select Yes if true. Otherwise, select No.

- Only one tag can be assigned to an Azure resource.
- Tags can be assigned using ARM templates.
- Tags can be used to enforce naming standards.

✓ No / Yes / No

Q31. You can assign _____ to every Azure resource.

✓ Tags

Q32. What can you use to identify underutilized or unused Azure virtual machines?

✓ Azure Advisor

Q33. Match the Azure portal blade to the task:

- Monitor the health of Azure services
- View security recommendations

✓ Monitor the health of Azure services = Azure Service Health

View security recommendations = Microsoft Defender for Cloud (or Azure Advisor – Security)

Q34. You need to prevent accidental deletion of resources in a resource group. Which setting should you use?

✓ Delete lock (CanNotDelete resource lock)

Q35. _____ extends Azure compliance and monitoring to hybrid and multicloud environments.

✓ Azure Arc

Q36. You need to deploy five identical virtual machines using an existing virtual machine. Arrange the steps in the correct order.

- ✓ 1. Generalize the existing VM
2. Create a VM image from the generalized VM
3. Create an ARM template referencing the image
4. Deploy 5 VMs using the ARM template
